

IN THE CLAIMS:

1. (Currently Amended) A wireless device for connecting to one or more network node
5 devices, the network node devices connected to one or more wirelines, the wireless
device comprising:

one or more wireless signal generators supporting one or more wireless
connections;

one or more memories comprising an identifier ~~corresponding to~~
10 identifying the wireless device;

one or more negotiators that negotiate with the network node device in
order to establish a connection to one or more wirelines connected to the network node;
and

B 1
a requesting process that requests, through ~~one or more messages~~ a
15 message sent to the network node device, bridging to a call in progress, the ~~one or more~~
~~messages~~ message comprising the request for bridging and the identifier.

2. (Currently Amended) A wireless device for connecting to one or more network node
20 devices, the network node devices connected to a plurality of wirelines, the wireless
device comprising:

one or more wireless signal generators supporting one or more wireless
connections;

one or more memories comprising an identifier, wherein the identifier
~~corresponds to~~ identifies the wireless device;

25 a negotiator that negotiates with the network node device in order to
establish a connection to one or more wirelines connected to the network node; and

a requestor that requests privacy through ~~one or more messages~~ a message
sent to the network node device, the ~~one or more messages~~ message comprising the
request for privacy and the identifier.

30

3. (Currently Amended) A method of joining a call in progress from a wireless device through wireless communication with a network node device comprising the steps of:

initiating a connection by the wireless device between the wireless device and the network node device;

5 signaling the network node device by the wireless device to join a call in progress already connected through said network node device, the step of signaling comprising communicating a request to join the call in progress and an identifier to the network node device, wherein the identifier identifies the wireless device; and

joining the call in progress.

10 4. (Original) The method of claim 3 further comprising the step of communicating with the network node device to establish the eligibility of the wireless device to join a call in progress.

15 5. (Canceled)

6. (Currently Amended) A method of establishing call privacy for a wireless device connected to a network node device comprising signaling by the wireless device to the network node device that privacy is requested, the step of signaling comprising
20 communicating a request for privacy and an identifier to the network node device,
wherein the identifier identifies the wireless device.

25 7. (Original) The method of claim 6 further comprising the step of communicating with the network node device to establish the eligibility of the wireless device to request privacy.

8. (Currently Amended) A storage medium containing a computer program to direct a wireless device to initiate connection with a network node device, the computer program having the steps of:

30 signaling, by using at least one pre-established command channel, a request for a connection;

communicating an identifier from the wireless device to the network node device, wherein the identifier ~~corresponds to~~ identifies the wireless device;

selecting a wireless signaling method to be used between the wireless device and the network node device; and

5 requesting, through ~~one or more messages~~ a message sent to the network node device, bridging to a call in progress, the ~~one or more messages~~ message comprising the request for bridging and the identifier.

Cont
10 9. (Currently Amended) A storage medium containing a computer program to direct a wireless device to initiate connection with a network node device, the computer program having the steps of:

 signaling, by using at least one pre-established command channel, a request for a connection;

 communicating an identifier from the wireless device to the network node
15 device, the identifier identifying the wireless device;

 selecting a wireless signaling method to be used between the wireless device and the network node device; and

 requesting privacy through ~~one or more messages~~ a message sent to the network node device, the ~~one or more messages~~ message comprising the request for
20 privacy and the identifier.
